

Peninsular Malaysia | Central Route

Central Route (ex Kuala Lumpur) and the first site that we will visit is the mangrove forest of the Kuala Selangor Nature Park and the surrounding areas. Mangroves are a very unique ecosystem, which is influenced by the rise and fall of the tides. Second site is Bukit Tinggi where we will target a rare endemic and other highland birds. The third site is the hill resort of Fraser's Hill (also part of an IBA) for highland & lower montane birds. Here we will get to see about 50 -70 highland species and we will hope to catch good views of mostly sunda endemics.

Pick up point

Kuala Lumpur International Airport or Kuala Lumpur Hotels.

Target Birds

50 to 200 species
